Welcome to our Orthopaedic Braces and Supports Product Catalogue

We, at Ortholife know there are several companies from which you can choose, and we thank you for choosing us.

Ortholife is pleased to introduce our latest catalogue which demonstrates our strong commitment to the orthopaedic industry.

Ortholife is a global brand who produce an extensive range of Orthopaedic bracing and supports and aligned products with a focus on quality affordability and innovation. This passionate team is led by experienced Orthopaedic Professionals.

We would love the opportunity to showcase our range to you. Please contact us to arrange a time to demonstrate the range.

Best Regards,
The Ortholife Care Team

ORTHOLIFE®

Ortholife's customer service

- Our number 1 core value is to exceed our customer's expectations of us in every transaction.
- We look at our enterprise as a customer service business that just so happens to be in the Orthopaedic market.
- Other companies tell you why they are number 1. We say we are number 3 as you and your patients are numbers 1 and 2.
- Our aim is to look after customers so well that they cannot afford to buy elsewhere.
- Our most important USP is U. We hope U will put US to the test.
- 100% satisfaction or your money back guarantee.

Ankle & Foot

The human foot combines mechanical complexity and structural strength. The ankle serves as foundation, shock absorber and propulsion engine. The foot can sustain enormous pressure (several tons over the course of a one-mile run) and provides flexibility and resiliency.

High-Rise Air Walker

Features

- Moulded uprights with steel reinforcement for increased durability
- Medial/lateral air cell system inflates both sides equally
- The soft nylon/foam liner has an integrated pneumatic system increases stability while decreasing pain and swelling
- Air is easily adjusted to achieve desired compression and custom fit
- Contoured strut design allows the walker to conform to the leg, ensuring a better fit
- Shock absorbing insole reduces impact of heel strike when ambulating
- Low profile, rocker bottom is designed to promote a natural and stable gait
- Wide foot bed provides increased comfort and stability
- Easy to use, hook and loop straps are adjustable to fit the contours of the leg and to reduce pressure on the injury site in the event of swelling

Knee & Leg

The knee is the largest joint in the human body and is considered the most complicated one. It is formed by the lower part of the femur, the tibial plateau and the knee cap. It enables hinge and rotating movements as the connection between the upper and lower leg. This means that we can not only bend the lower leg backward but also rotate the lower leg and foot towards the upper leg.

Spine

Your spinal cord is a bundle of nerves that runs down the middle of your back. It carries signals back and forth between your body and your brain. A spinal cord injury disrupts the signals. Spinal cord injuries usually begin with a blow that fractures or dislocates your vertebrae, the bone disks that make up your spine.

Elbow

The elbow is a very important part of the arm. The motion the elbow performs helps you with rotating the forearm, intricate hand motions, and increases power to the upper body. Elbow injuries are easily ignored and to most, may not seem as serious as an injury to the knee or hip. Unfortunately, if left untreated, injuries to the elbow can have long-term effects. If you are injured, or are experiencing elbow pain, please follow up with one of our physician specialists.

Wrist

The wrist joint is used in many day-to-day activities. Sports, such as golf and tennis, can put extreme stress on the wrist. Long-term wear and tear resulting in pain from sports such as these can make it nearly impossible to participate.

Wrist injuries can have an affect in the workplace. If you have a strenuous job involving the use of your hands, or one that has you glued to a computer, symptoms may increase with usage.

Shoulder

The shoulder is the most mobile and flexible joint in the human body. We all depend upon our shoulders for a very important reason -- the shoulder joint is what allows us to control where we can move our arms in order to use them. Shoulder pain can be one of the most frustrating problems for patients because a shoulder that is not working normally interferes with almost every part of daily life.
